1012665784349810820	surprise_test	releases/test-squad/20230225	20230224-testsquad	Framerate-independent fire rate fixes Previously, there was a bug where the fire rate of all guns in Rec Room varied based on framerate. This did not only affect low framerate builds but also high framerate builds. This build should fix all of those issues: * Automatic guns will always fire at a consistent speed independent of framerate * Burst fire guns will always fire bursts at a consistent speed independent of framerate * Laser weapons (like the Beam Cannon in Laser Tag or the Mirror Gun in Crescendo) will do a consistent amount of damage per second independent of framerate * The max rate of fire of semi-automatic guns should be achievable at various framerates. These changes affect both trigger handles and RRO guns. So you can try out things like Showdown, Paintball, Laser Tag, or Rec Royal. Known Bugs Any known unrelated bugs that are currently live will still exist in this build.	2023-02-24T11:02:02.000000Z
